

## Disaster Recovery as a Service (DRaaS)

### Ensure Seamless Operations with Zones Cloud-based DRaaS Solution

#### BUSINESS CHALLENGES:

Organizations today face growing risks from unexpected outages and disasters, which can lead to significant data loss and disruption in operations. Setting up and managing a dedicated disaster recovery site requires substantial investment, making it unfeasible for many businesses, especially those with limited IT resources. Ensuring seamless business continuity requires a robust solution that minimizes downtime and recovery costs.

#### SOLUTION OVERVIEW:

Zones Disaster Recovery as a Service (DRaaS) delivers a cloud-based solution for backing up data and IT infrastructure using Microsoft Azure in a third-party environment. With a Software-as-a-Service (SaaS) model, DRaaS allows for rapid restoration of IT operations after a disaster without requiring a separate recovery facility. Our solution reduces costs and simplifies management by shifting the complexities of disaster recovery to experienced specialists. Leveraging Azure's robust infrastructure, DRaaS ensures business continuity, protects critical data, and facilitates seamless failover and failback. Tailored to your specific needs, it provides peace of mind and alleviates the pressure on small IT teams.

#### DEMO OVERVIEW:

The demo showcases the configuration of Azure Recovery Services for on-premises workload protection, including testing and validation of the recovery process in the Azure environment. Experience the efficiency of a fully managed disaster recovery solution.
